

Lander County Conservation District

in partnership with Nevada Department of Wildlife, U.S. Fish and Wildlife Service, Dept. of Ag., Natural Resources Conservation Service, Nevada Conservation District Program, Bureau of Land Management, private landowners, and others.

Wildlife friendly and energy efficient water !

This trough was built to create offsite water for cattle in a sensitive landscape which supports sage grouse, mule deer, and many other native wildlife species. The trough eliminates spillover, creates an open water source for wildlife as well and includes a wildlife escape ramp.

Working with NRCS to insure built structures are wildlife friendly

Meadow restoration project on private lands

On the ground collaboration

Ongoing efforts include the treatment of noxious and invasive weeds, providing cost share funds for hiring crews and assisting in re-seeding efforts to enhance and recover critical sage grouse habitat and productive grazing lands.

Offer scholarships each year to local students pursuing studies in natural resources, agriculture, veterinary medicine and related fields.
